Percentage of Fat Consumed (US)

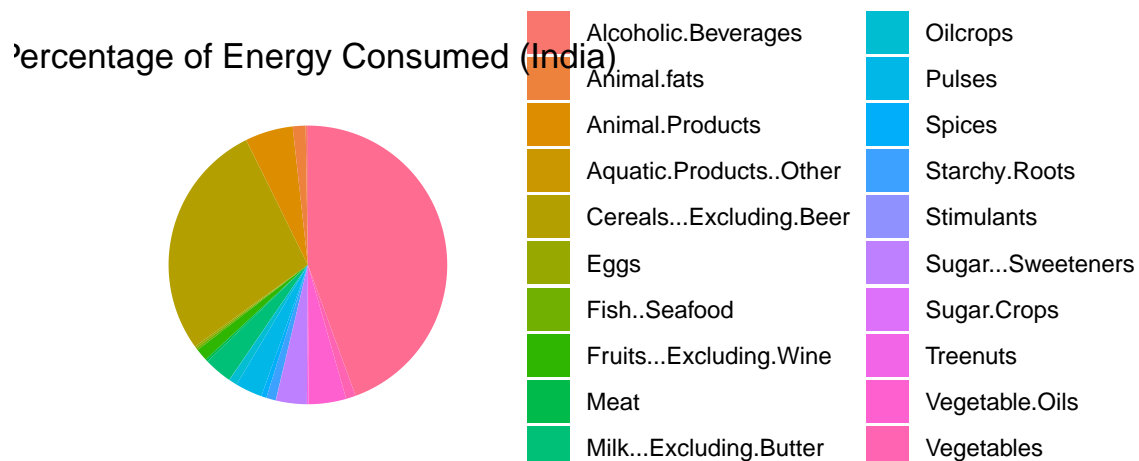

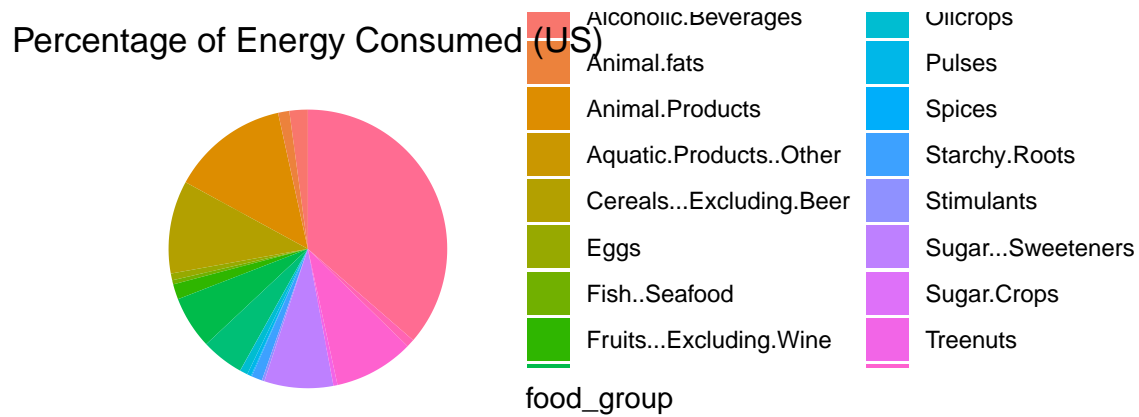

food_group

Percentage of Fat Consumed (India)

From the above pie charts, it seems like India consumes more fat from Alcoholic Beverages than the US and US consumes more fats from pulses/Spices than that consumed in India. But overall, it seems like the difference in each category isn't drastically different between the two countries.

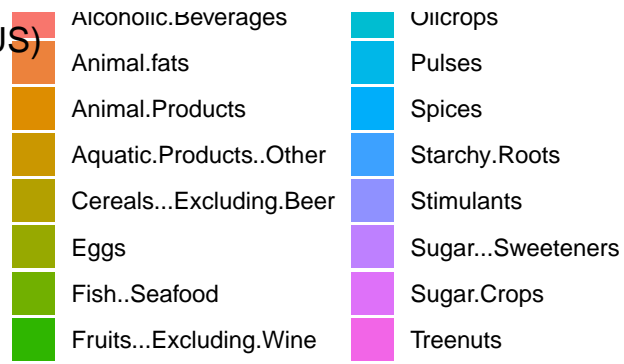

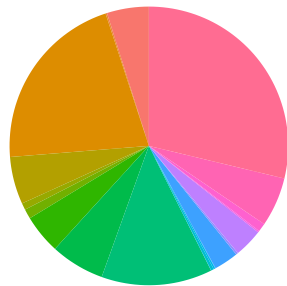

```
grid.arrange(us_food_kcal_pie_chart, India_food_kcal_pie_chart, nrow = 2)
```

For the energy consumed(in kilo calories), India has slightly higher percentage in the Animal product category whereas US is higher in percentage in Treenuts and Sugar Crops.

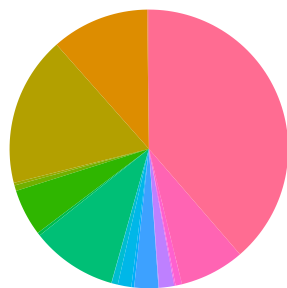

```
grid.arrange(us_food_kg_pie_chart, India_food_kg_pie_chart, nrow = 2)
```

Percentage of Food Supply (US)

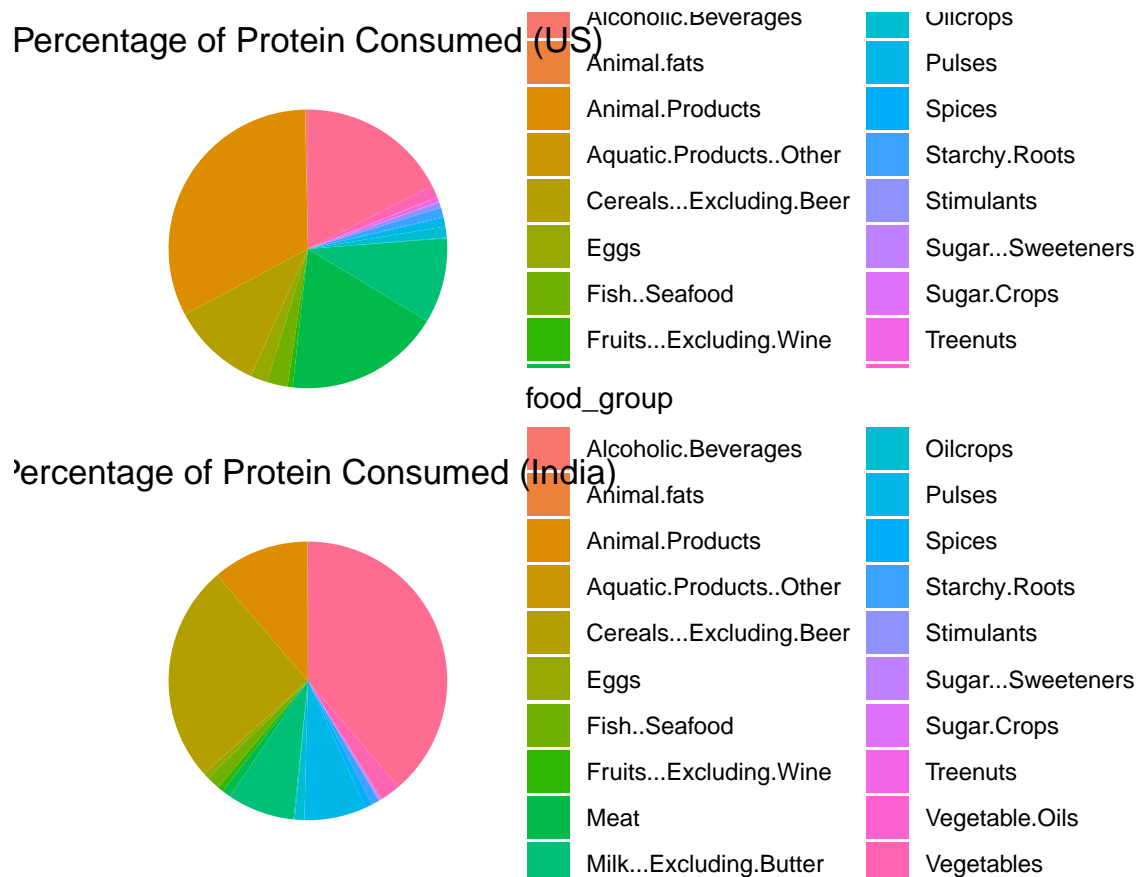

food_group

Percentage of Food Supply (India)

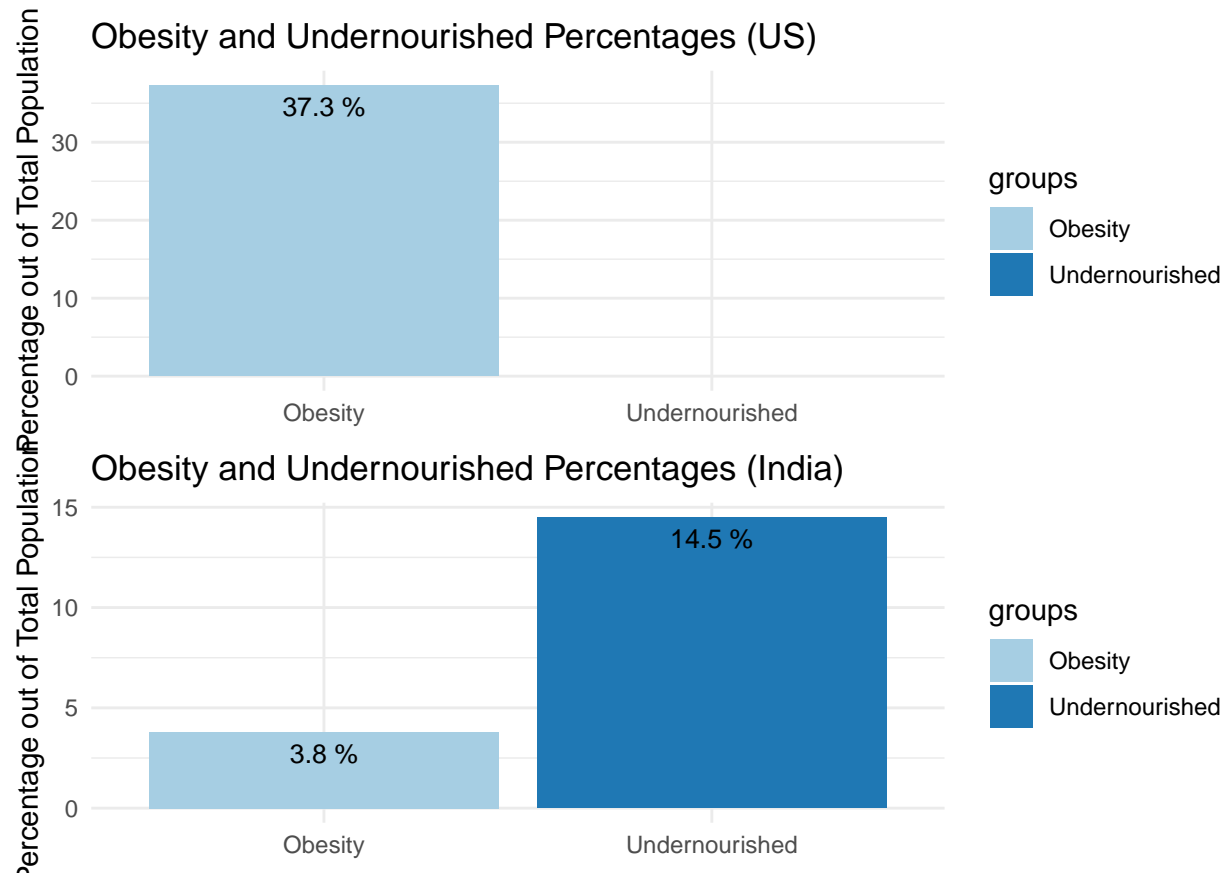

Looking at the food supply comparison, we see that India has more supply of Animal Products than US whereas US has slightly higher supply of Fruits excluding wine than India.

```
grid.arrange(us_protein_pie_chart, India_protein_pie_chart, nrow = 2)
```

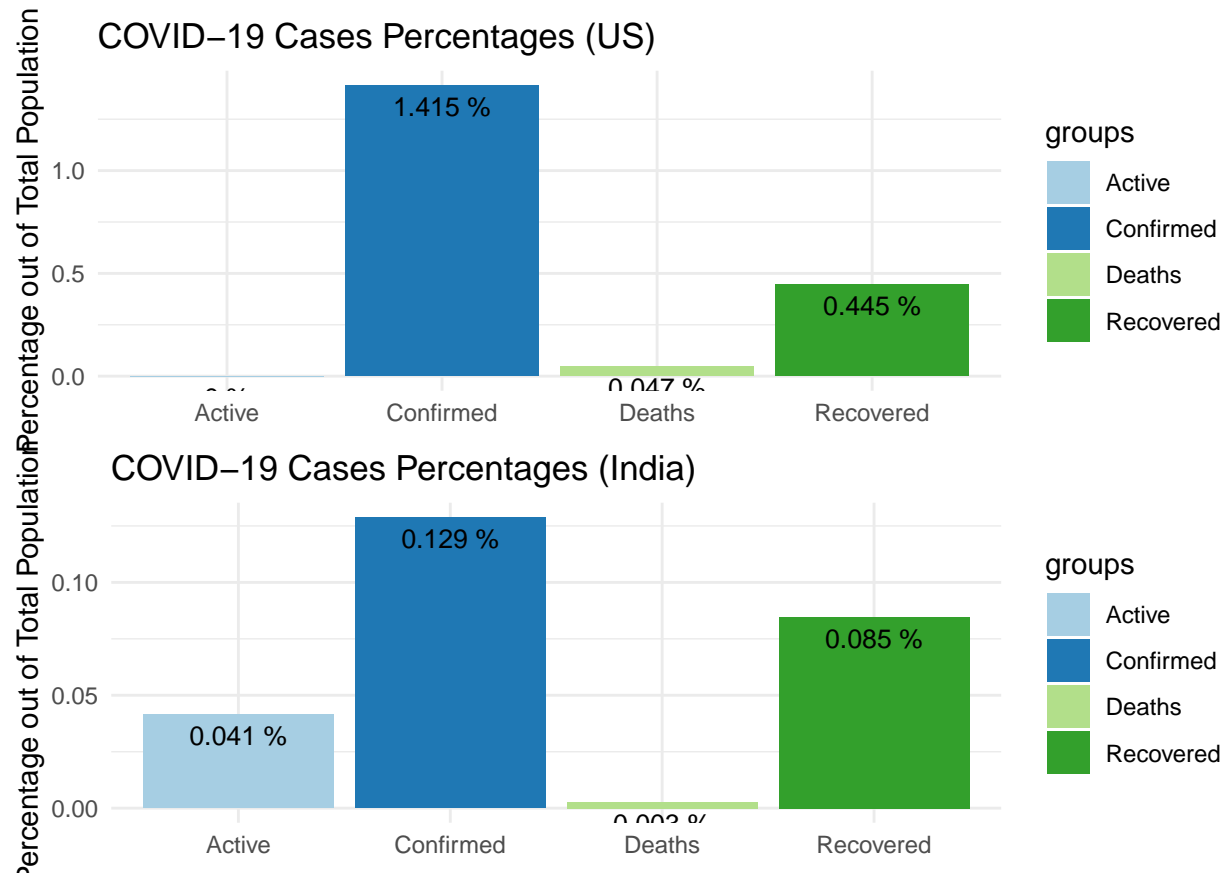

From the above charts we can see that India's protein consumption from Alcoholic Beverages, Pulses /Spices /Starchy roots and Fish Seafood is more than US. On the other side US's protein consumption is more from Fruits and Animal Fats/ Animal Products.

```
grid.arrange(us_obesity_undernourished_bar_plot, India_obesity_undernourished_bar_plot, nrow = 2)
```

Looking at the obesity and undernourished rate bar plot above, US has higher obesity percentage whereas India has higher Undernourished percentage.

```
grid.arrange(us_covid_cases_bar_plot, India_covid_cases_bar_plot, nrow = 2)
```

And lastly, taking a quick look at the percentage of COVID cases. US confirmed cases is 1.415% of the entire population, whereas that of India is 0.129% of the entire population. The recovery rate of India is higher than that of US.

Conclusion Connecting all the observations above, we can conclude that one of the reasons why India has a lower COVID infection rate could be related to the country's dietary choices. Even though there are thousands of other factors that can impact infection rate in either countries, this analysis still proves that adapting to a healthier diet is one of the most important steps we can take to help reduce the amount of COVID cases.
